

## Environmental Policy

**IT-Green, the registered (®2005) trade name of Computer displays UK Limited was devised with a view to providing an ethical solution to the recycling of ex-corporate/SME computer hardware. In effect, the aim was to provide a recycling route for old ICT hardware, waste electronics and waste electrical equipment, at all times avoiding the export of WEEE (Waste Electrical and Electronic Equipment). This 'greener' solution offers clients a managed recycling route, in that best recovery techniques (BATTRT) are incorporated within the processing of their waste.**

Since its inception, numerous additions have been incorporated within the process, as well as refinements, all with a view to continually improving the environmental performance of our services and operations.

In reviewing this document, we have retained the following key environmental concerns associated with the provision of a collection, recycling and data destruction service to the public and industry in general:

1. Collection of redundant hardware: Maximising transportation per collection by reducing the 'carbon miles' per item collected. As the number of collections (bookings) within a given geographic area increase, we can allocate numerous pick-ups per vehicle per day, reducing fuel consumption.
2. The levels of Energy consumption (Electricity, Diesel fuel).
3. Waste reduction: Paper, cardboard, polystyrene incorporated within a collection.

The company is committed to reducing these and tackling other environmental issues as well as continually improving of our environmental performance. To help achieve this, Computer Displays UK Limited have implemented Employee Health and safety Plans and an environmental Management System.

We are committed to working with our team, clients, regulatory bodies and neighbours to achieve the following objectives:

1. Meet and where possible exceed all environmental regulations relevant to our organisation.
2. Increase cost-effectiveness by reducing our consumption of energy.
3. Reduce waste and prevent pollution both locally and in the wider environment
4. Systematically assess all aspects of our company
5. Set targets for measurable annual improvements in resource efficiency
6. Make our progress available for independent assessment

It is the responsibility of all our team to fully support this policy through active participation and co-operation. The introduction and implementation of this policy is a commitment to all our team at Computer Displays UK Limited and a shared responsibility amongst us all. This environmental policy will be displayed at all times in our office and will be available to all members of the public and clients via our website: [www.it-green.co.uk](http://www.it-green.co.uk).
